DETAILED ACTION

Claim 13 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim must depend from other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1 to 5, 7 to 11, 14, 15, 19, 20, 23 to 25 and 31 to 33 drawn to an isolated nucleic acid encoding a receptor protein, the protein encoded thereby, a vector comprising the nucleic acid, a host cell comprising the vector, and methods of use. Claim 33 is included with this group only in so far as it relates to the nucleic acid referred to therein.

Group II, claim 12, drawn to a transgenic animal.

Group III, claims 16 and 17, drawn to an antisense molecule.

Group IV, claims 21, 22, 26 to 29 and 35 to 37, drawn to a compound of unspecified constitution defined solely by a recited biological activity as a receptor agonist or antagonist.

Group V, claim 30, drawn to an antibody.

Group VI, claim 34, drawn to a receptor binding assay that does not employ a recombinant host cell.

The inventions listed as Groups I to VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or

Art Unit: 1646

corresponding special technical features for the following reasons: The isolated nucleic acid of invention I, the transgenic animal of invention II, the antisense molecule of invention III, the compound of invention IV, the antibody of invention V and the assay of invention VI lack unity of invention because they lack a common utility base upon a common special technical feature or combination of features lacking from the prior art. For example, the antisense molecule of invention III, the agonistic or antagonistic compound of invention IV and the antibody of invention V are structurally and chemically unrelated compounds. Further, the assay of invention VI is distinct because it is not limited to a process of employing any of the claimed compositions.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
